# The leading French manufacturer of lifting equipment

Leading french manufacturer of lifting equipment. **VERLINDE** produce in large batches electric wire rope hoist, electric chain hoist, electric belt hoist, electric winches, jib cranes, and cranes components in their fully modernized and enlarged production center of VERNOUILLET (France).

From CAD/CAM design to production by machines amongst the most modern in Europe combined with know-how from a skilled staff, each lifting equipment showing the **VERLINDE** brand ensures reliability and quality to users.

## New products, New concepts

**VERLINDE** has always been among the first companies to introduce new ideas for the innovation of hoisting units with a hook (more than 70 patents taken out in France and around the world). The new **EUROBLOC VT** electric wire rope hoist has been created within this avant-garde spirit, as it accounts for a total of 13 patents on its own.

The **EUROBLOC VT** electric wire rope hoist is, as of now, the only hoisting unit with wire rope and a hook that offers, in its standard version:

- Hook approach , «C» dimensions and the «F» approach distance of the hoist are the smallest available on the market (fig. 2).
- The pulley block presents only a slight lateral shift during hoisting motion (virtually vertical lifting) (fig. 1).
- The possibility to adjust speed while travelling (fig. 3).
- And more equipment to be discovered in the pages that follow.

fig. 1

fig. 2

fig. 3

# EUROBLOC® VT

Electric wire rope hoist for load from 800 to 100.000 kg

## CUSTOMISED INSTALLATIONS

### Foot mounted.

These hoists are not equipped with a trolley and are used for applications where horizontal movement is not required.

### Double girder trolley high, medium and low version

These hoists are fitted with a trolley for horizontal movement of loads and are designed to move particularly large loads.

### Monorail trolley with standard headroom (HPN).

These hoists are fitted with a trolley and are used for applications where horizontal movement is required.

### Monorail trolley with short headroom (HPR).

These hoists are fitted with a trolley for horizontal movement of loads and are designed to make optimal use of the height of lift and the limited space available.

# EUROB

Electric wire rope hoist for

## Hoisting Motor and Brake

Designed specifically for lifting, the 2-speed hoisting motor comes with all the necessary protections:

- Type IP 55 protection and F insulation class.
- Bimetal sensor
- Cooling fins enlarged significantly to encourage heat dissipation.

## Hoisting drum

There is a special patent for drum assembly and drum rotation without ball bearings.

Advantage: this prevents grease and steel particles from falling into the motor.

## Gear limit switches

The limit switch with 4 cams can be accessed on the gear unit and is used for managing the upper and lower limit switches of the hook, switching from low to high speed, and for managing phase reversals.

High  
lifetime

## Safety

**Travelling.** Variable travelling speed for precise positioning of loads.

**Wire rope.** in galvanized steel as a standard, high safety factor (factor 4,6 -FEM 2m).

**Electrical cubicle.** The cover can be folded back so that you can store your tools for maintenance (the cover has two steel safety wires to prevent it from falling).

**MT2.** Electronic control of the recording of hoist solicitation status.

**Electrical.** Low voltage control for more safety.

**Traverse wheels.** The 4 steering wheels are fully streamlined for improved safety.

**Hook and pulley block.** Rotating hook and pulley block with safety latch.

## Easy maintenance

**Hoisting motor.** Motor cooling increased by 30 % (tunnel effect).

**Hoisting brake .** The brake is tested for hoist longevity under normal use conditions.

**Steering motor-reducer.** Steering reducer with one rail and a permanently lubricated connection.

**Drum.** The drum has been completely covered for better protection.

**Rope guide.** Built "without spring" so that it can be more easily replaced during maintenance.

**Electrical cubicle.** The wires go in and out by means of steel plugs that can be unbound and that are built into the case.

**MT2.** Calculation of the SWP (Safe Working Period).

**Assembly** is in modules, for easier management of spare parts for replacement.

**Surface treatment.** 2- component epoxy paint with 120  $\mu$  for greater protection.

# LOC® VT

load from 800 to 100.000 kg

## Easy service

## Ergonomics

**Hook and pulley block.** Ergonomical hook (area to grab and hold).

**Push button box.** Made with tinted polypropylene, grounded, with double insulation, ergonomical (IP 65 protection). Optional load display available.

**Electrical cubicle.** Located on the side of the hoist, easily accessible. The open / close system uses a quick closure method.

## Savings

**Hoisting motor.** 60 % operating factor and tropicalised as a standard for greater longevity.

**Travelling motor.** Tropicalised as a standard for greater longevity.

**Pulley block.** The best «C» dimension on the market for optimal use of the size of your buildings and optimal use of work areas.

**Travelling.** Variable travelling speed to reduce wear on steering rollers.

**Load limiter.** As ordered by the directive on "Machines" (required equipment). All EUROBLOC VTs are equipped with a load limiter as a standard (safety measure in the event of hoist overload). For greater longevity.

**Hook and pulley block.** Doesn't take up much space, permanently lubricated rollers, pulleys are in GGG cast iron, very resistant. A high pulley / wire rope diameter ratio gives the wire rope greater longevity.

## High technology

**Pulley block.** Only a small shift of the pulley block for hoisting (lifting is almost perfectly centred).

**Rope guide.** The guidance system does not get dirty, which allows for use in any type of environment.

**Drum.** A very high wire rope / drum diameter ratio (twice as large as the standard one), which:

- Increases the longevity of the wire rope.
- Reduces the approach data of the hoist.
- Reduces the "C" approach data of the hook.

**Electrical case.** Quite large, it is equipped with the speed variation module as a standard.

**Lifting gearbox.** Direct impulse gearbox unit, helicoid toothed gears, permanently lubricated, detector to prevent pressure overload.

**Optimal positioning of steering rollers.** The 4 steering rollers equally share the load in order to optimise your tracks.

## TMU

(Travelling motor unit)

The compact travel motor, which is especially designed for travelling in lifting equipment, is equipped with a variable speed system that is a standard equipment. Maximum speed range is 2 to 32 m/min. IP 55 protection.

The motor is designed to ease any necessary maintenance:

- "Intelligent" easy system for motor positioning and assembly onto the trolley.
- The motor receives power from a single plug that can be unbound easily.

## Rope guide

New rope guided system "very high performance" for difficult environments.

## MT2

EUROBLOC VT can be equipped with the optional MONITOR 2 (Electronic control of the recording of the hoist's tractive effort states: SWP, time running, starts, overloads, temperature, load, brake, etc.).

# EUROBLOC® VT

## Electric wire rope hoist for load from 800 to 100.000 kg

### OPTIONS

In addition to standard equipment each EUROBLOC VT can be fitted with mechanical or electrical optional features in order to satisfy your specific requirements:

- Non standard rail width.
- Special rail gauge.
- Higher travelling speed.
- Radio or infra-red remote control.
- Travelling limit switch.
- Derailment catches on double girder trolley.
- Boogies trolley (only with HPN).
- Missing phase control.
- Monitor 2 (MT2).
- 2 or 3 steps overload device.
- Overload device temporization.
- Optical and audible warning connected to overload limit switch.
- Non standard main voltage.
- Rain cover.
- Klaxon on pendant box.
- Explosion proof and / or spark proof version.
- Load indication device.
- Motors thermal protection.
- Class H motors.
- Heating device on motor.
- Stainless steel hoist electrical cubicle IP 55 or IP 65.
- CSA electrical control.
- Hook operated upper limit switches.
- Ramshorn hook.
- Additional brake.
- Lifting variable speed.
- Crash protection with electronic cell.

### Standards and hoisting regulations

**CE directive.** Since 1st January 1995, the European Machinery Directive 98/37 EEC obliges that machine constructors ensure that their machinery complies with certain regulations, standards, national legislations and technical specifications.

Every VERLINDE product is CE labelled and is delivered with an CE compliance certificate (annex IIA) or with an incorporation certificate (annex IIB).

**FEM:** European lifting equipment association.

**SWP:** A Safe Working Period is calculated for each electrical hoists unit according to the average operating time of the hoisting equipment, load capacity and class of application. After this period, a general service carried out by the constructor is necessary.

**Class of operation.** According to FEM classification, two fundamental criteria must be taken into account : the type of duty and the class of duty (according to average daily operation time average load).

**ISO standard.** Classes of operation can also be defined according to ISO grouping (1Am = M4, 2m = M5, 3m = M6, etc.).

**Type of duty. Light service.** Equipment rarely subject to maximum load and frequently to very little load. **Medium service.** Equipment quite often subject to maximum load and frequently to very little load. **Heavy service.** Equipment frequently subject to maximum load and frequently to medium load. Very heavy service. Equipment frequently subject to maximum or near maximum load.

Average daily operating time (hours)			0,5		1		2		4		8		16		
			V0,25	T2	V0,5	T3	V1	T4	V2	T5	V3	T6	V4	T7

## VERLINDE is:

The leading French constructor and exporter of hoisting and mechanical handling equipment.

- A group employing 5,000 staff.
- A large range hoisting equipment from 60 to 100.000 kg
- ISO 9001 quality control certified.
- Easily-accessible consultants in over 80 countries.

## In France

9 Sales offices, 18 after sale service centres, 11 manufacturing plants for EUROPONT travelling cranes and a national distribution network.

## World-wide

Branches in Germany, Holland, Belgium, Italy and distributors in Africa, Germany, Spain, Italia, Argentina, Austria, Brazil, Chilli, Ireland, United Kingdom, Sweden, Norway, Denmark, China, Thailand, Indonesia, Malaysia, Vietnam, India, United States, etc.
